

Pair of small 19th Century rock crystal Candlesticks:  
of baluster form on an octagonal base. Rock Crystal  
is the clear colourless (white) form of the mineral quartz.  
The term is derived from the Ancient Greeks who found it  
in caves near Mount Olympus, and called it 'krustallos',  
meaning ice, as they believed it to be water which had been  
permanently frozen by the gods.

Height: 6¼" - 16.0cm

Width: " - 0.0cm
